

Evitics

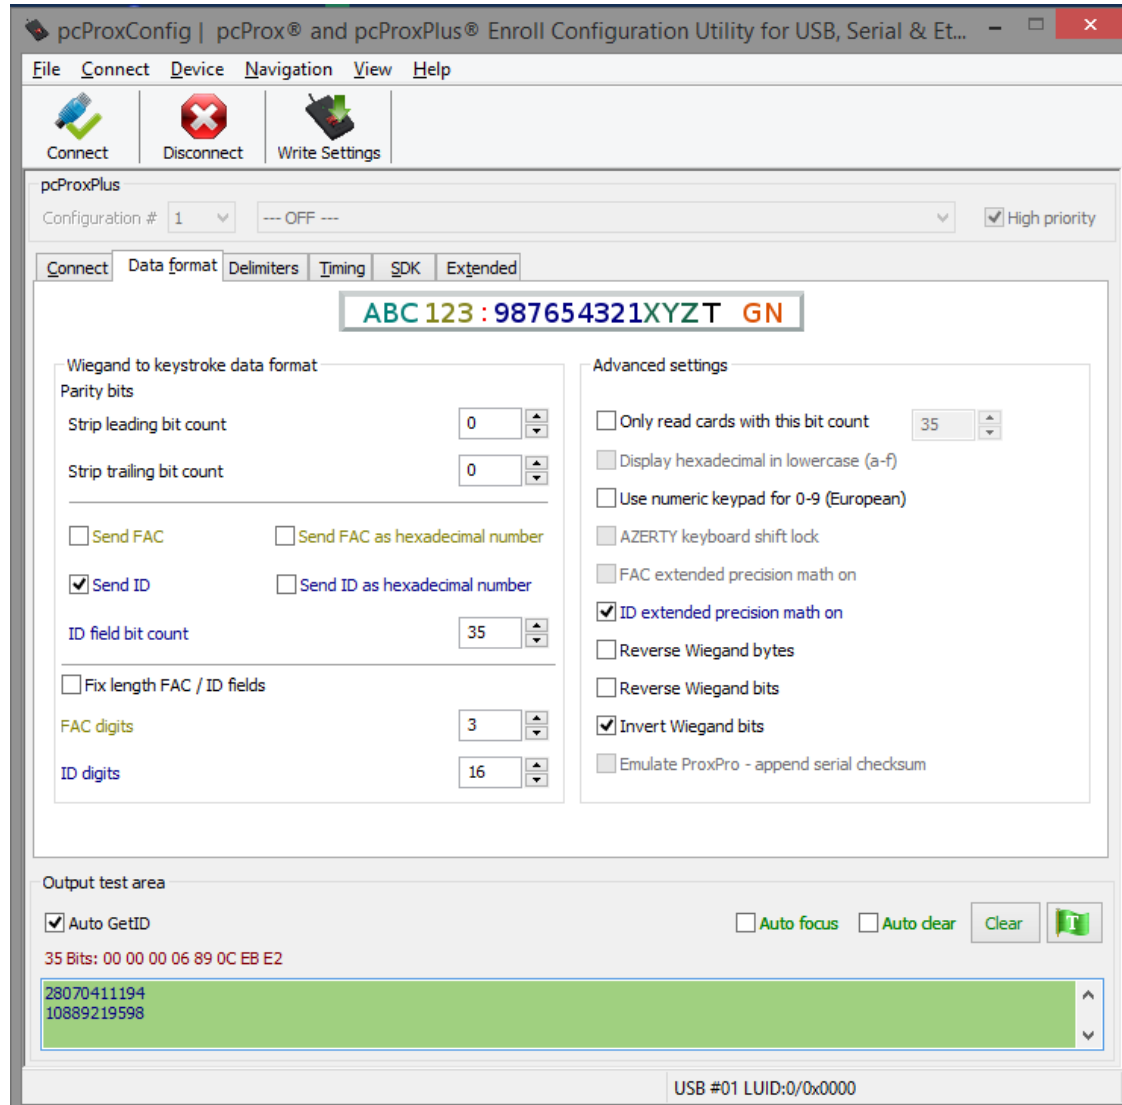

New RFID LINK:

A. Setting up RFID Readers

<https://amzn.to/2HkGSJr>

a. RFIDEas - pcProx readers

- Go to the website and download the pcProx configuration utility.
(Windows only)
<https://www.rfideas.com/support/product-support/pcprox-plus>
- Plug in the reader and run the configuration software you just downloaded. It should look like the screen below. Select the "Data format" tab and make selections to match what shows below.

B. Evitics interfaces with Georgia Tech Enterprise Directory (GTED)

- The account is [REDACTED] (password located on hosting in `httpdocs>api>config.php`) **Expires: Nov. 15, 2015**

- You should be able to change the password through the passport utility like you would your account password (I think). Otherwise, contact OIT.

- b. There is also an evitics_dev account, which I don't think is really being used, but I would still change them both to be safe.

NOTE: The service account evitics_prod has expired so I will have to talk to OIT to get GTED access again.
